

Readme File for Snakes and Ladders Game

Project Overview:

The **Snakes and Ladders Game** is a graphical desktop game built using GTK (GIMP Toolkit) and C programming. The game features a two-player mode where each player rolls a die to move their pieces along a board. The board contains both snakes and ladders, affecting the players' progress. The objective is to be the first player to reach square 100.

Features:

- ⇒ Two-player gameplay: Players alternate turns to roll a die and move their pieces.
- ⇒ Snakes and Ladders: The board includes snakes (which move a player backward) and ladders (which move a player forward).
- ⇒ Score management: The score is saved in a text file (score.txt), keeping track of player scores.
- ⇒ Graphical Interface: The game uses images for the game board and player pieces, providing a visual experience.
- ⇒ Dynamic die rolls: Each player rolls a die to determine how many spaces to move on their turn.

Technologies Used:

- ⇒ **Programming Language:** C
- ⇒ **Graphical Toolkit:** GTK
- ⇒ **File Handling:** Simple file handling in C for score management
- ⇒ **Compiler:** GCC (GNU Compiler Collection)

Installation Instructions:

1. Install GTK:

- On **Linux**:
- On **Windows**, download and install GTK from the official website: [GTK Download](#).

2. Clone the Repository:

- If the project is in a Git repository, clone it using:

git clone <https://your-repository-link>

3. Build the Project:

- Navigate to the project directory.
- Compile the C files using GCC:

```
gcc -o snakes_and_ladders main.c `pkg-config --cflags --libs gtk+-3.0`
```

4. Run the Game:

- Execute the compiled file.

Usage:

1. When the game starts, two player pieces are placed on the board.
 2. Players take turns to click the "Roll Die" button, which generates a random number (between 1 and 6).
 3. The players move their pieces based on the die roll, either advancing or retreating based on the snakes and ladders on the board.
 4. The first player to reach square 100 wins the game.
 5. The score is saved and updated after each win in a file named score.txt.
